

Environmental policy

We are fully committed to our corporate responsibility of using energy and resources in an economical way. By doing so, we aim to make a lasting contribution to environmental protection. As our most important operational contribution, we strive to continuously improve our energy and resource efficiency, thus also reducing operating costs.

The protection of people and the environment has a significant influence on corporate policy decisions. We regard legal obligations as a minimum requirement and aim to go beyond these to achieve a higher level of environmental protection and safety. This involves optimising processes and products in order to prevent incidents that could harm the environment or individuals. All employees are asked to take personal responsibility and monitor their own behaviour when implementing and complying with laws, regulations and standards. This means that we are not only protecting the environment and people, but also our competitiveness in the long term.

We manufacture our products in harmony with the environment by using raw materials with the smallest possible potential risk. Waste prevention is a priority right from the procurement stage. We have completely done away with unnecessary packaging. Necessary packaging is unavoidable waste which is separated and retained in the reusable materials cycle or disposed of in line with the relevant standards. When purchasing and using devices and machines, we attach great importance to low energy consumption.

KrampeHarex makes every effort to influence its suppliers, partners and customers where possible in order to help protect the environment in all areas of the company.
